

CARBON REDUCTION PLAN

Take a look at our reduction targets to achieve our goal of net zero carbon emissions, these are based on where we were as a business in 2019.

2025

Over this five year period we will achieve a reduction in carbon emissions by changing how we operate as a business. This plan starts in 2022 and includes the operation of our site here, the other buildings within the wider organisation and reducing business travel.

2030

2040

Working with our supply chain we hope to achieve net zero carbon emissions over this period and by the deadline of 2050, in line with the government's policy.

2050

As a business we have implemented a certified Energy Management System ISO50001. We have rolled out Office 365 to enable colleagues, where possible, to work from home, therefore reducing the need for travel.

We have an employee engagement programme to encourage and celebrate local environmental and carbon improvements. Our Green Ambassadors promote environmental and carbon responsible behaviours and work practices. Our UK mainland sites have already switched to almost 100% renewable electricity. We have introduced electric and hybrid vehicle options for our company car and small commercial vehicle fleet.
